DETAILED ACTION

Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

2. Claims 1 and 2 are rejected under 35 U.S.C. 102(b) as being anticipated by Muramatsu et al.

Re claim 1, Muramatsu discloses a method for controlling the drive of an actuator of an active vibration isolation support system that includes an elastic body (16) receiving a load from a vibrating body (18), a liquid chamber (54) having a wall of which at least a part is formed from the elastic body, a movable member (48) that moves out and back to change the capacity of the liquid chamber in a cycle, and an actuator (74) that receives a supply of current to generate an electromagnetic force for moving the movable member out, the method comprising the step of: controlling the current supplied to the actuator such that the current passing through the actuator becomes zero at least when the movable member has moved back. (Column 16, line 65 – Column 17, line 17)

Re claim 2, Muramatsu discloses the setting of a large number of consecutive micro time regions in the cycle; and carrying out duty control of the voltage that is

applied to the actuator in each of the micro time regions. (Column 16, line 65 – Column 17, line 17, Figure 3)

Conclusion

3. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Nemoto, Aoki, and Satoh, teach a method of controlling the drive of an actuator of an active vibration isolation support system.
